## INTRODUCTION.

---

THE Greek Coins in the following Collection have been selected by Mr. MERLIN for their rarity or preservation, or for both combined; and are all, with scarcely an exception, in better condition than is generally met with of the same types even in good Collections. It has not therefore been deemed always necessary to describe condition; but defects are systematically noticed, so that in all cases where nothing is said to the contrary, the Greek Coins are to be understood as well preserved.

Some of the coins are of the highest possible rarity, and presumed to be unique, viz. lot 28, an entirely new type of Cierium; lot 39, Thebes, exhibits a full face of Hercules, which is not only new of this town, but probably unknown of any other. Lot 63 presents the first known silver coin of Ios, and from its interesting character is perhaps the most valuable coin in this Collection. There are also new varieties in lot 72, Perperene; lot 105, Elaeusa insula, a coin of importance, because the prow on the reverse fixes the insular position of the place of mintage in contradistinction to the Carian city of the same name; or at least suggests a strong probability.\* Lot 107, an unusually large medallion of Temenothyrae, with an unpublished reverse, and sundry others.

---

\* I am indebted to Mr. Maximilian Borrell for this judicious observation.—A.L.

For perfect preservation lot 26, Perseus, is unrivalled, and lot 5, Macedon under the Romans, is of that fine style of work which is found in some coins of the age of Pericles, but is comparatively unknown in coins of so late a date as this.

The greatest care has been taken to exclude all false coins, so that not one of a doubtful character has been admitted.

The writer is authorized to add that there will be no reserves whatever.
